

Clone with Relationships App

In today's digital data world, there is an impending challenge in creating humongous multiple copies of product data, which are identical in nature with just minute aspects that differentiate them. In order to create new data from existing ones, and maintain consistency of data, there is a need for seamless cloning of multiple entities in the application.

The application offers Clone with Relationships App, which allows users to clone and create multiple entities (Product and associated SKUs), and update or maintain minute aspects based on the business needs. The cloned entities are an exact copy of the source entity (Data, Attributes, and Relationships) except the Entity Identifier (MDM ID, SKU ID, and SKU Name).

Target Audience

- Data Stewards
- Merchendizers
- Administrators

Value Proposition

- **Enhanced Productivity and Efficiency:** By allowing users to clone and create multiple entities quickly, the app significantly reduces the time and effort required for data entry and setup. The app ensures that all relevant data, attributes, and relationships are copied accurately, minimizing manual errors and ensuring consistency across entities.
- **Improved Data Integrity and Consistency:** Ensures that all cloned entities are exact replicas of the source, preserving data integrity and reducing discrepancies. Maintains uniformity across product lines by replicating attribute relationships accurately, ensuring that all entities adhere to the same data standards.
- **Scalability and Growth Support:** Supports business growth by allowing rapid scaling of product lines without the need for extensive manual data entry. Easily duplicate entities for new markets or regions, allowing for quicker market entry and expansion strategies.

Key Features

Create copy of existing data

Clone the child entities records

Maintain the consistency of data

Reduce the effort and time to create new entities

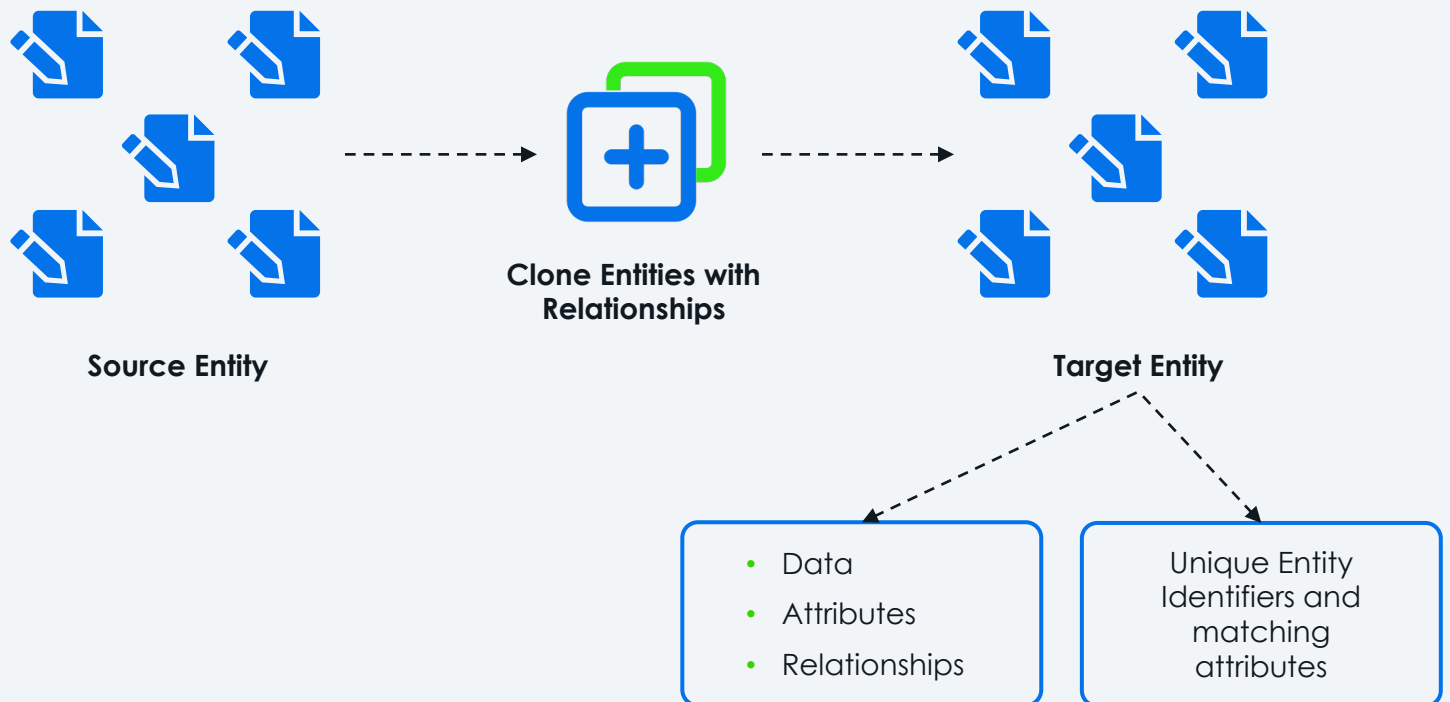

Avoid complexity of manually copying and pasting data

Clone with Relationships App

The screenshot shows the 'Search Thing Domain' interface. At the top, there's a search bar and filters. Below, a table lists products with columns for Thumbnail, Preview, Type, Product ID, and ID. A context menu is open over the table, showing options like Copy, Paste, Compare, Clone, and 'Clone with Relationships' (highlighted with a red box). Other menu sections include CONNECTORS, CONTEXT MANAGE, and APPS.
